BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 1 · EPITHELIAL TISSUE

PRACTICE

Parts of an epithelium

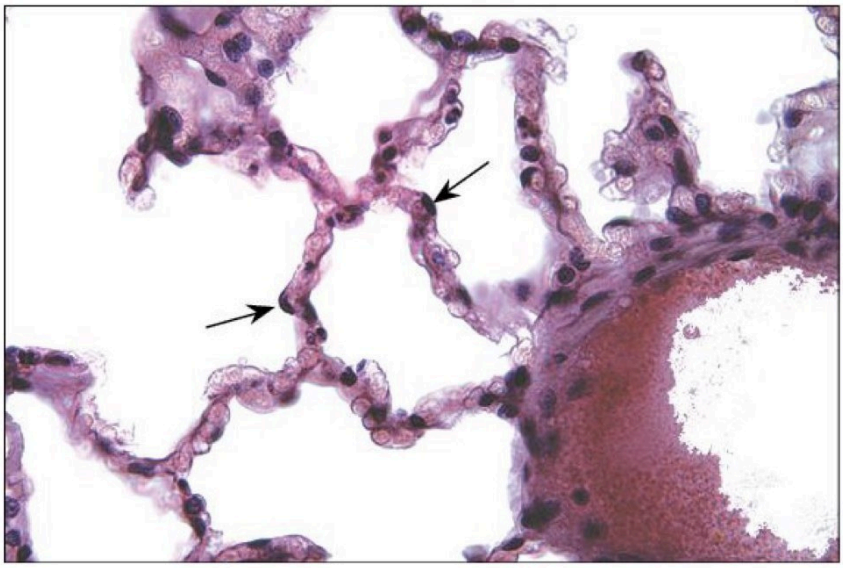

1. Name what holds the cells together here (four kinds).
2. Name this surface.
3. Name this surface.
4. Name this tissue layer.
5. Name the junction that anchors the cell to the basement membrane.
6. Name this surface.
7. Name this layer.

Write each answer on its line with a dry-erase marker, then flip the card to check.

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 2 · EPITHELIAL TISSUE

PRACTICE

Name this tissue

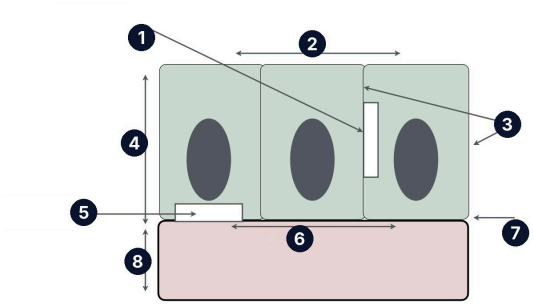

8. Name the tissue under the epithelium.
1. Name this tissue.
2. What does it look like?
3. Where is it found?
4. What does it do?

Write each answer on its line with a dry-erase marker, then flip the card to check.

ANSWER KEY

Parts of an epithelium

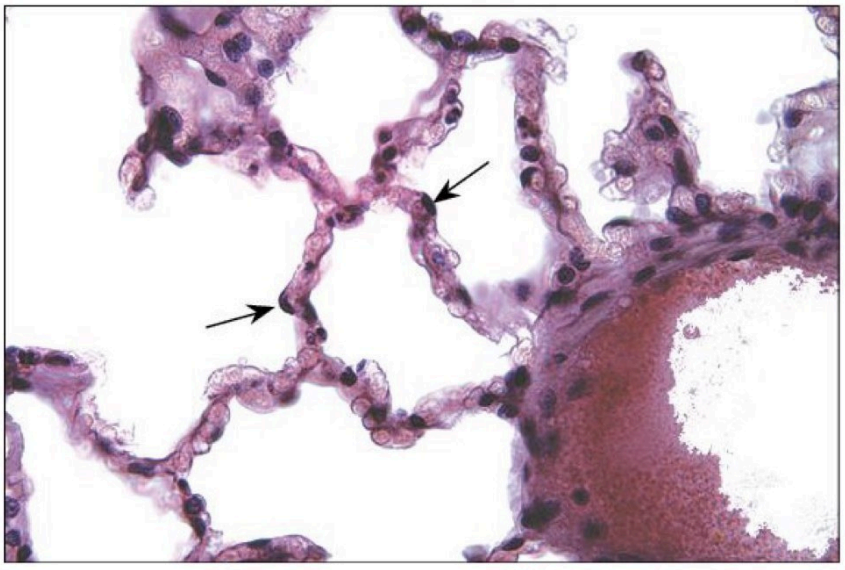

1. Name what holds the cells together here (four kinds).
   Cell junctions
2. Name this surface.
   Apical (free) surface
3. Name this surface.
   Lateral surface
4. Name this tissue layer.
   Epithelium
5. Name the junction that anchors the cell to the basement membrane.
   Hemidesmosome
6. Name this surface.
   Basal surface
7. Name this layer.
   Basement membrane
8. Name the tissue under the epithelium.
   Connective tissue

Check your answers, then wipe the front clean for the next round.

ANSWER KEY

Name this tissue

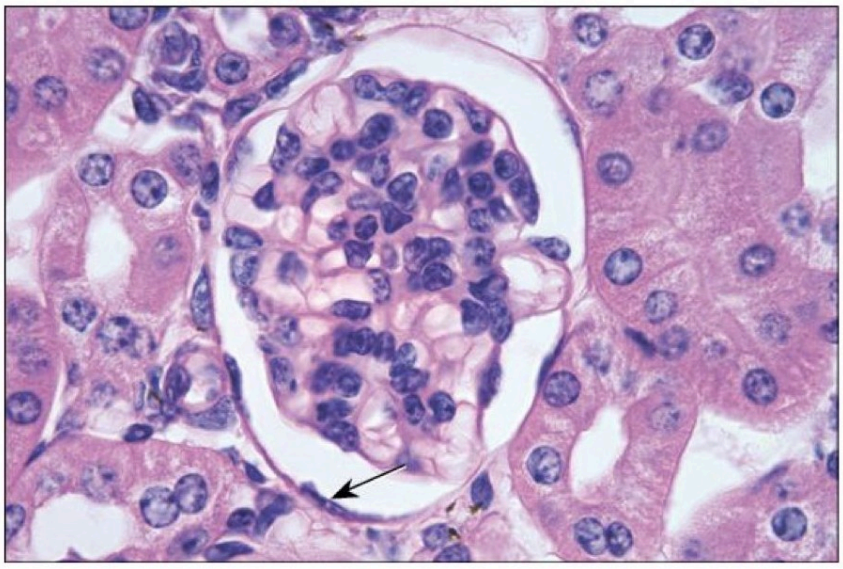

1. Name this tissue.
   Simple squamous epithelium
2. What does it look like?
   One layer of flat cells; thin, flat nuclei
3. Where is it found?
   Alveoli of the lungs
4. What does it do?
   Diffusion and gas exchange

Check your answers, then wipe the front clean for the next round.

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 3 · EPITHELIAL TISSUE

PRACTICE

Name this tissue

1. Name this tissue.

2. What does it look like?

3. Where is it found?

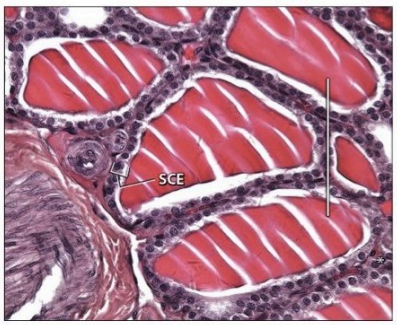

4. What does it do?

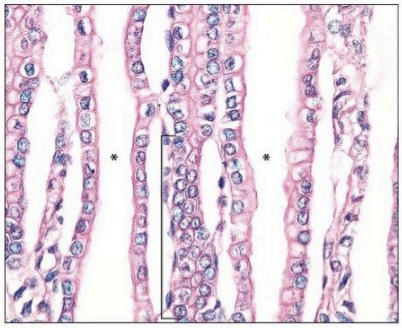

Write each answer on its line with a dry-erase marker, then flip the card to check.

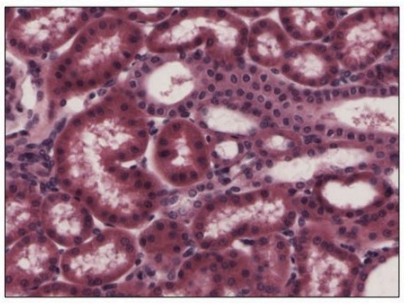

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 4 · EPITHELIAL TISSUE

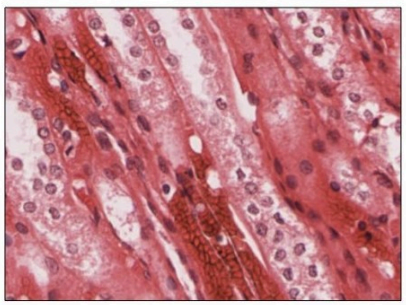

PRACTICE

Name this tissue

1. Name this tissue.

2. What does it look like?

3. Where is it found?

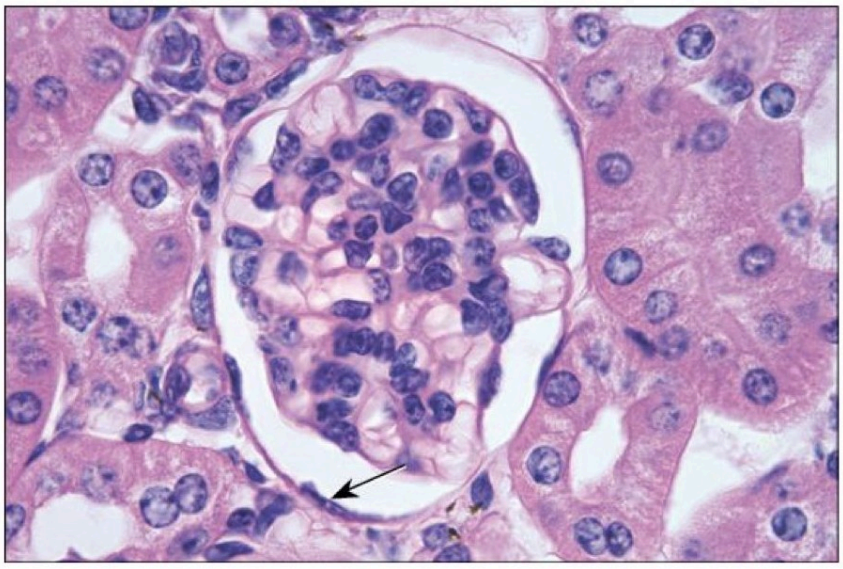

4. What does it do?

Write each answer on its line with a dry-erase marker, then flip the card to check.

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 3 · EPITHELIAL TISSUE

ANSWER KEY

Name this tissue

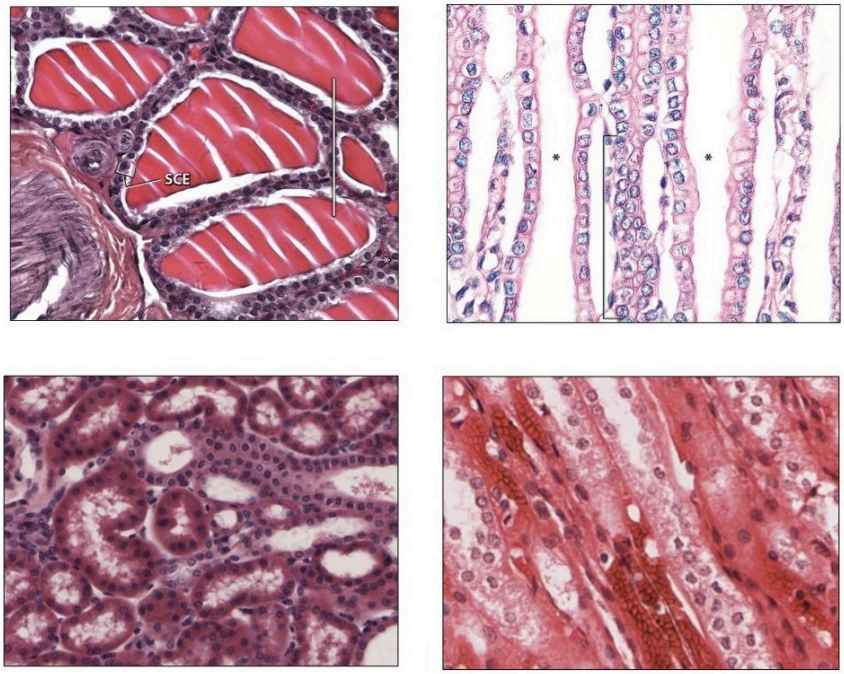

1. Name this tissue.
   Simple squamous epithelium
2. What does it look like?
   One layer of flat cells; thin, flat nuclei
3. Where is it found?
   Glomerular (Bowman) capsule of the kidney
4. What does it do?
   Diffusion and filtration

Check your answers, then wipe the front clean for the next round.

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 4 · EPITHELIAL TISSUE

ANSWER KEY

Name this tissue

1. Name this tissue.
   Simple cuboidal epithelium
2. What does it look like?
   One layer of cube-shaped cells with round, central nuclei
3. Where is it found?
   Glomerular (Bowman) capsule of the kidney
4. What does it do?
   Absorption and secretion

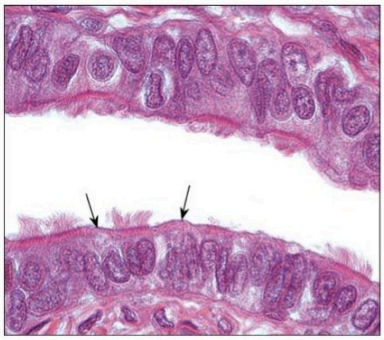

Check your answers, then wipe the front clean for the next round.

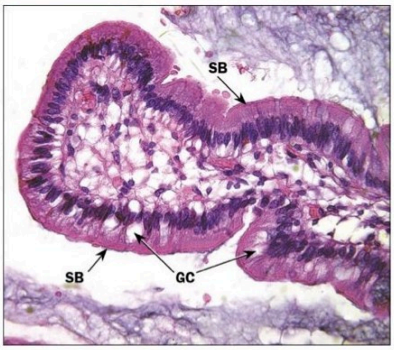

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 5 · EPITHELIAL TISSUE

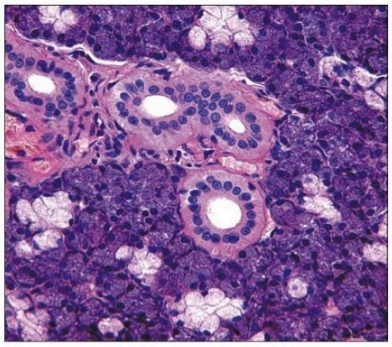

PRACTICE

Name this tissue

1. Name this tissue.

2. What does it look like?

3. Where is it found?

4. What does it do?

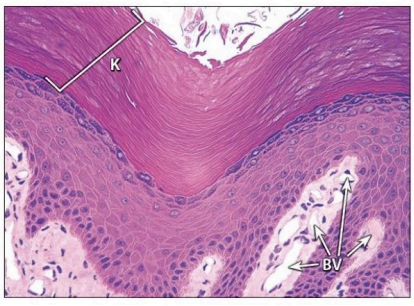

Write each answer on its line with a dry-erase marker, then flip the card to check.

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 6 · EPITHELIAL TISSUE

PRACTICE

Name this tissue

1. Name this tissue.

2. What does it look like?

3. Where is it found?

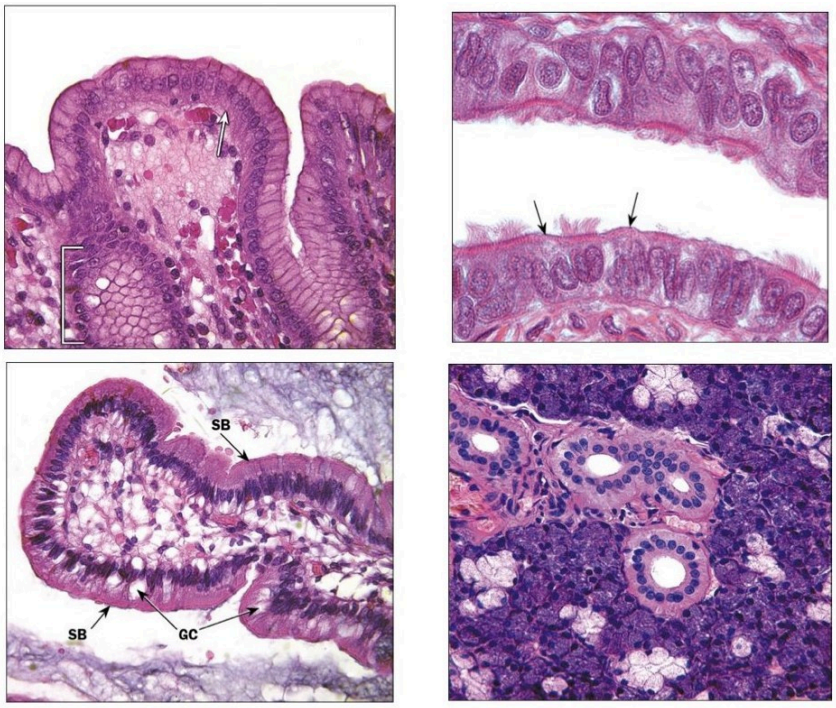

4. What does it do?

Write each answer on its line with a dry-erase marker, then flip the card to check.

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 5 · EPITHELIAL TISSUE

ANSWER KEY

Name this tissue

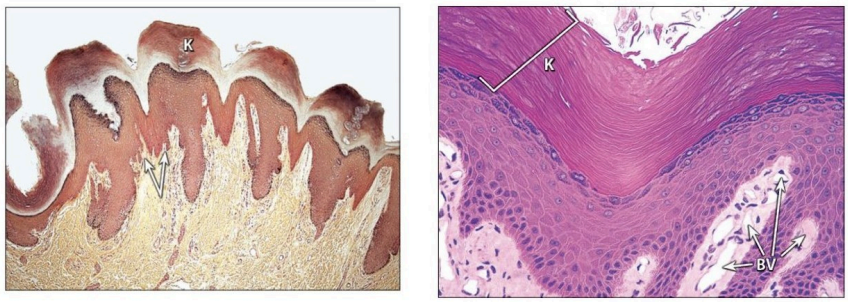

1. Name this tissue.
   Simple columnar epithelium
2. What does it look like?
   One layer of tall cells; nuclei near the base; may have goblet cells and microvilli
3. Where is it found?
   Digestive tract, gallbladder, some glands
4. What does it do?
   Absorption and secretion of mucus and enzymes

Check your answers, then wipe the front clean for the next round.

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 6 · EPITHELIAL TISSUE

ANSWER KEY

Name this tissue

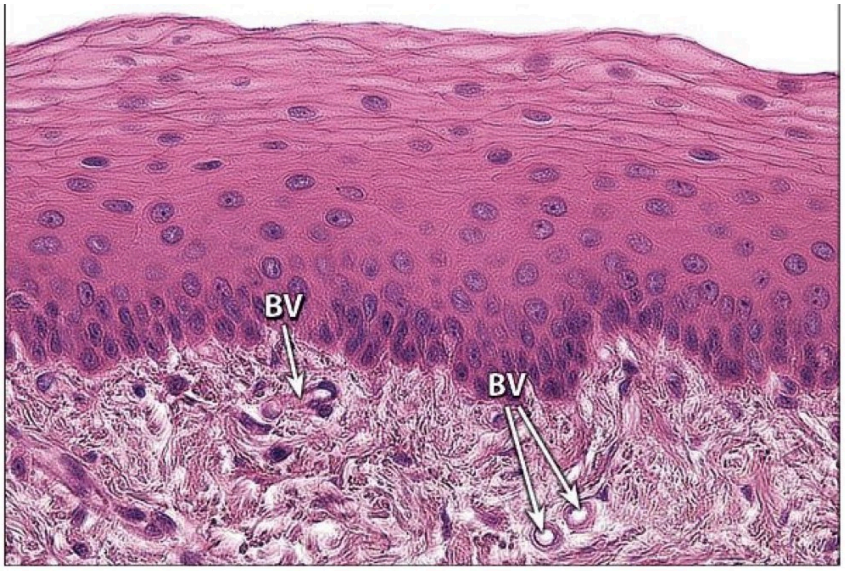

1. Name this tissue.
   Stratified squamous epithelium, keratinized
2. What does it look like?
   Many layers; flat surface cells filled with keratin
3. Where is it found?
   Epidermis of the skin
4. What does it do?
   Protection; waterproof barrier against abrasion and microbes

Check your answers, then wipe the front clean for the next round.

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 7 · EPITHELIAL TISSUE

PRACTICE

Name this tissue

1. Name this tissue.

2. What does it look like?

3. Where is it found?

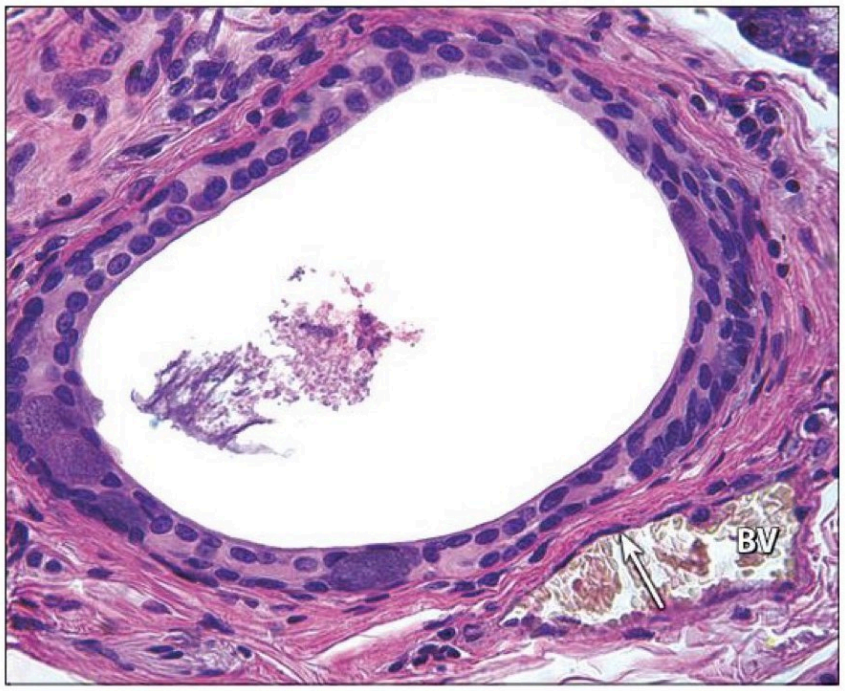

4. What does it do?

Write each answer on its line with a dry-erase marker, then flip the card to check.

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 8 · EPITHELIAL TISSUE

PRACTICE

Name this tissue

1. Name this tissue.

2. What does it look like?

3. Where is it found?

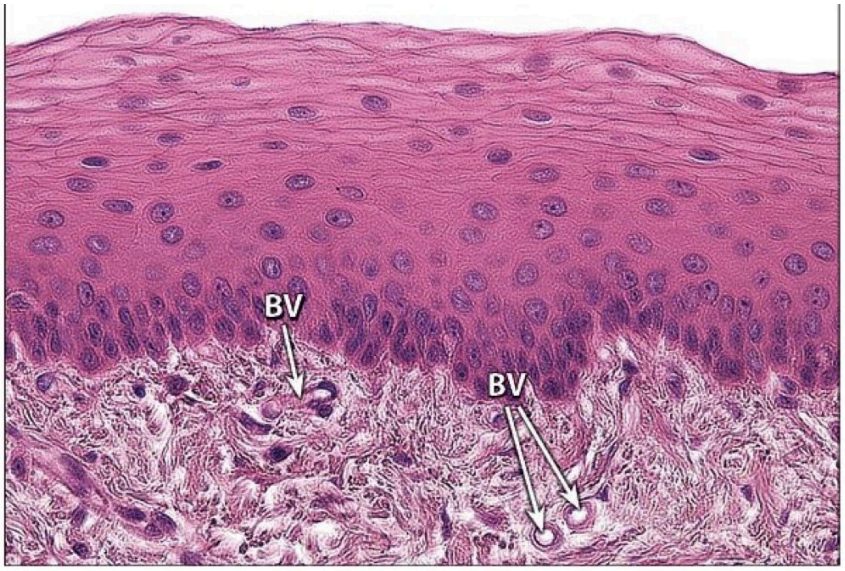

4. What does it do?

Write each answer on its line with a dry-erase marker, then flip the card to check.

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 7 · EPITHELIAL TISSUE

ANSWER KEY

Name this tissue

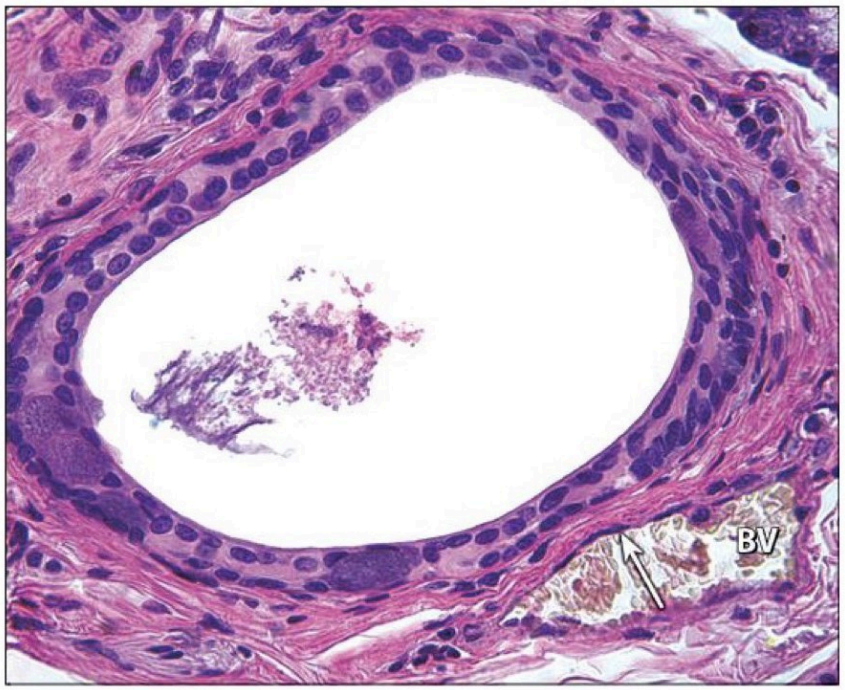

1. Name this tissue.
   Stratified squamous epithelium, nonkeratinized
2. What does it look like?
   Many layers; flat, living surface cells with no keratin
3. Where is it found?
   Mouth, esophagus, vagina (moist linings)
4. What does it do?
   Protection against abrasion, pathogens and chemicals

Check your answers, then wipe the front clean for the next round.

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 8 · EPITHELIAL TISSUE

ANSWER KEY

Name this tissue

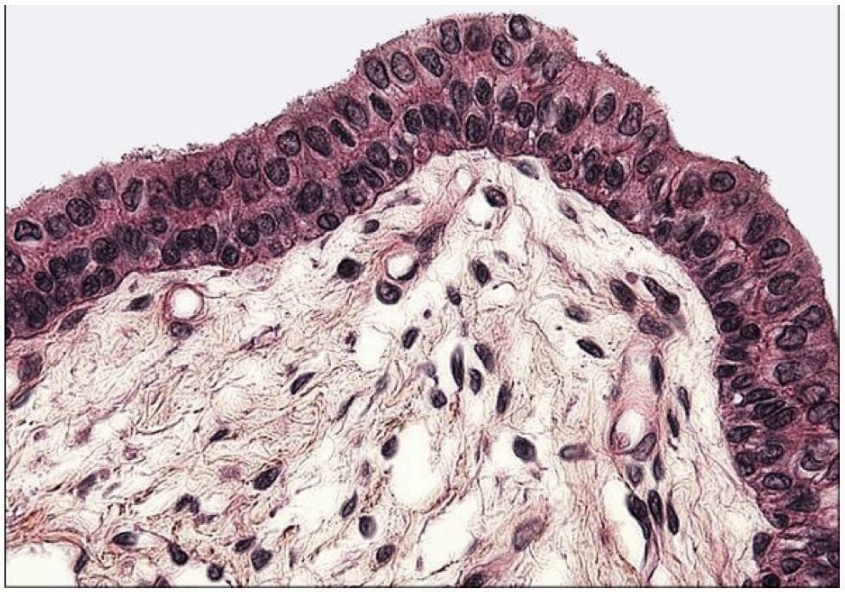

1. Name this tissue.
   Stratified cuboidal epithelium
2. What does it look like?
   Usually two layers of cube-shaped cells
3. Where is it found?
   Ducts of sweat glands and mammary glands (uncommon)
4. What does it do?
   Protection and secretion

Check your answers, then wipe the front clean for the next round.

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 9 · EPITHELIAL TISSUE

PRACTICE

Name this tissue

1. Name this tissue.

2. What does it look like?

3. Where is it found?

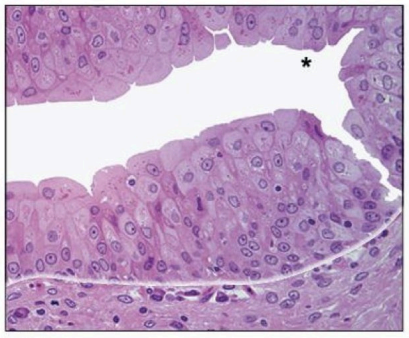

4. What does it do?

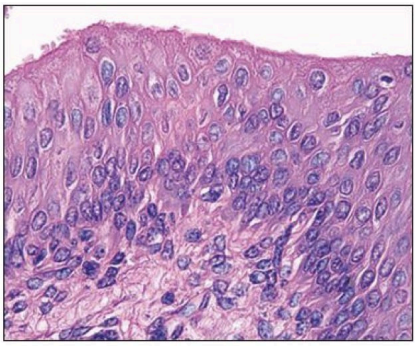

Write each answer on its line with a dry-erase marker, then flip the card to check.

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 10 · EPITHELIAL TISSUE

PRACTICE

Name this tissue

1. Name this tissue.

2. What does it look like?

3. Where is it found?

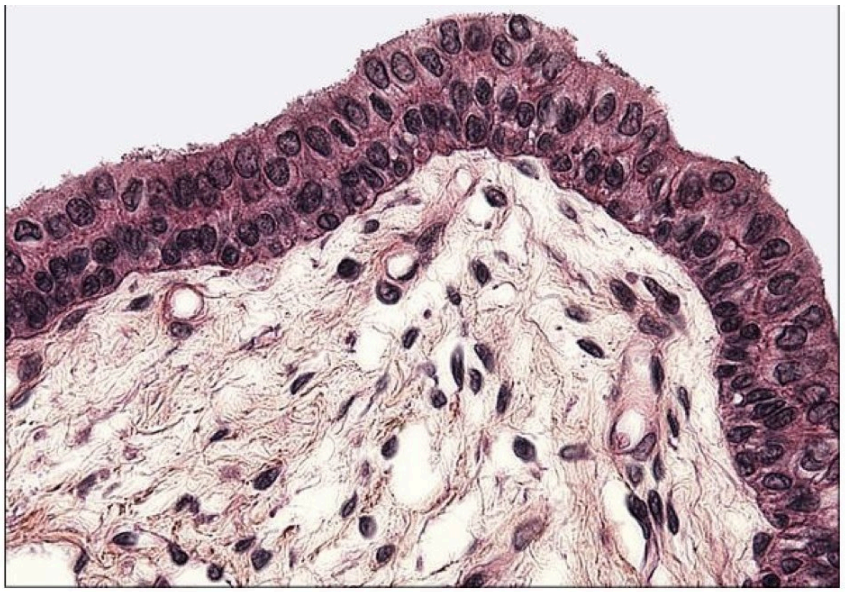

4. What does it do?

Write each answer on its line with a dry-erase marker, then flip the card to check.

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 9 · EPITHELIAL TISSUE

ANSWER KEY

Name this tissue

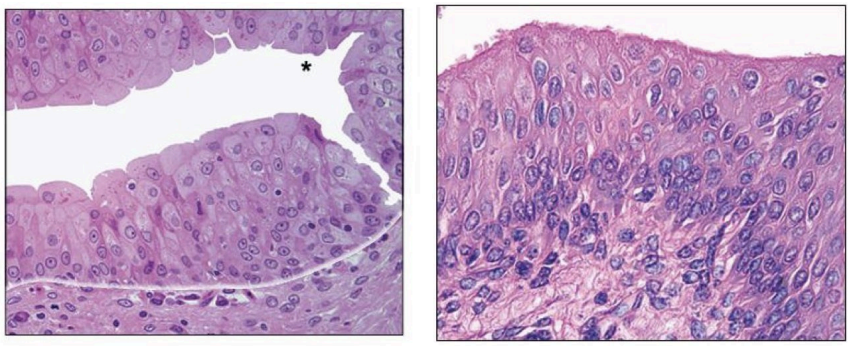

1. Name this tissue.
   Stratified columnar epithelium
2. What does it look like?
   Several layers; tall cells on the surface
3. Where is it found?
   Large ducts of glands, male urethra (uncommon)
4. What does it do?
   Protection and secretion

Check your answers, then wipe the front clean for the next round.

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 10 · EPITHELIAL TISSUE

ANSWER KEY

Name this tissue

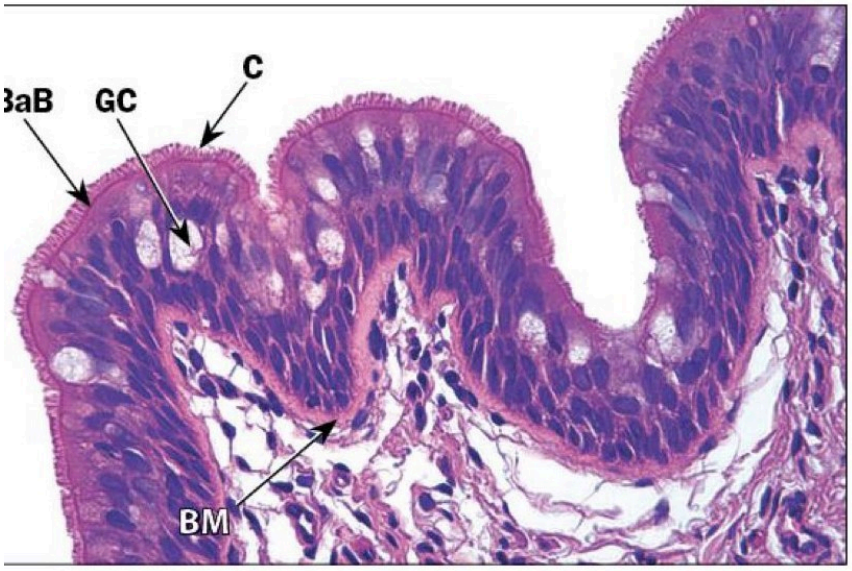

1. Name this tissue.
   Transitional epithelium
2. What does it look like?
   Many layers; dome-shaped surface cells that flatten when stretched
3. Where is it found?
   Urinary bladder, ureters, renal calyces, part of the urethra
4. What does it do?
   Stretches; protects against urine

Check your answers, then wipe the front clean for the next round.

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 11 · EPITHELIAL TISSUE

PRACTICE

Name this tissue

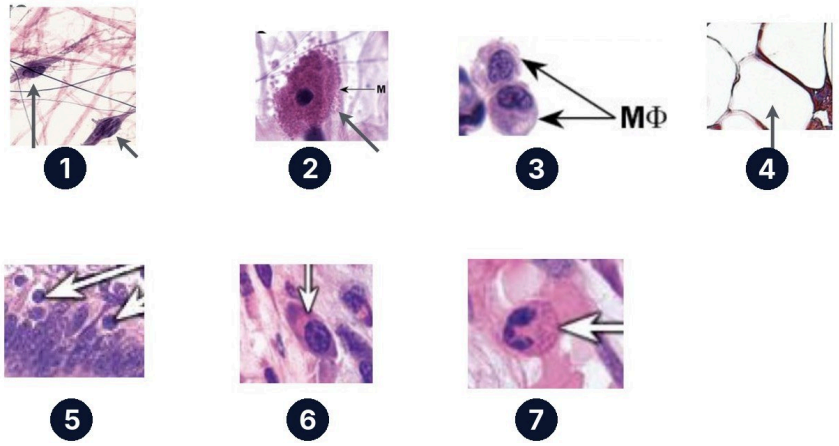

1. Name this tissue.
2. What does it look like?
3. Where is it found?
4. What does it do?

Write each answer on its line with a dry-erase marker, then flip the card to check.

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 12 · CONNECTIVE TISSUE

PRACTICE

Cells found in connective tissue

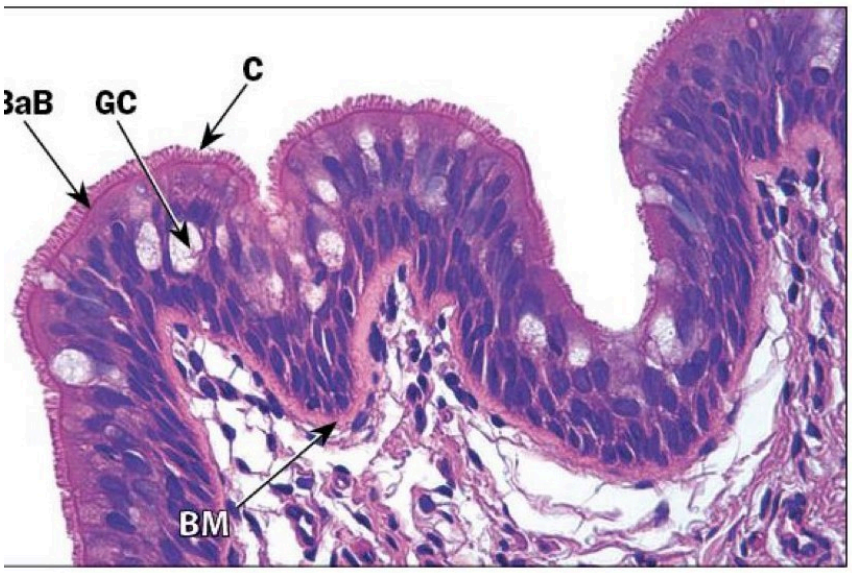

1. Name this cell.
2. Name this cell.
3. Name this cell.
4. Name this cell.
5. Name this cell.
6. Name this cell.
7. Name this cell.

Write each answer on its line with a dry-erase marker, then flip the card to check.

ANSWER KEY

Name this tissue

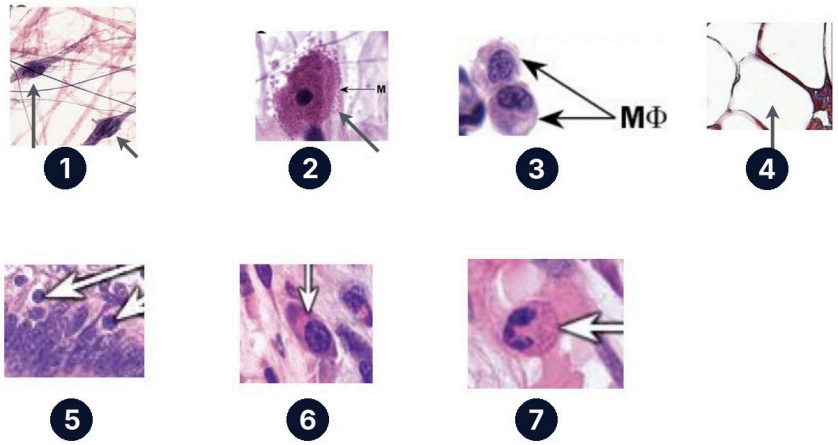

1. Name this tissue.
   Pseudostratified ciliated columnar epithelium
2. What does it look like?
   One layer that looks like many; nuclei at different heights; cilia and goblet cells
3. Where is it found?
   Trachea and upper respiratory tract
4. What does it do?
   Secretes mucus and moves it with cilia

Check your answers, then wipe the front clean for the next round.

ANSWER KEY

Cells found in connective tissue

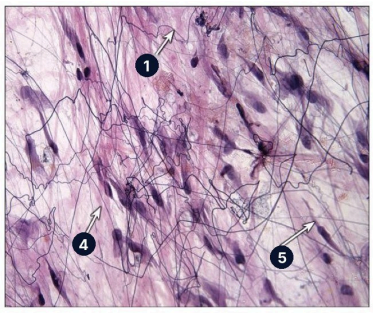

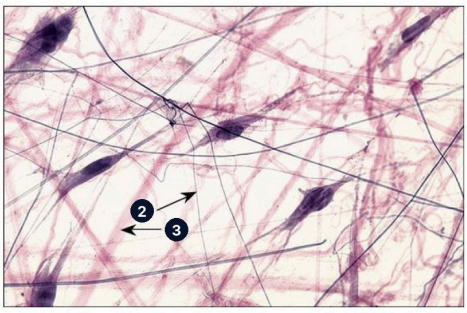

1. Name this cell.
   Fibroblast
2. Name this cell.
   Mast cell
3. Name this cell.
   Macrophage
4. Name this cell.
   Adipocyte
5. Name this cell.
   Lymphocyte
6. Name this cell.
   Plasma cell
7. Name this cell.
   Neutrophil

Check your answers, then wipe the front clean for the next round.

PRACTICE

Fibers in connective tissue

1. Name this fiber (thin, dark, branching).

2. Name this fiber (thin, dark, branching).

3. Name this fiber (thick, pink).

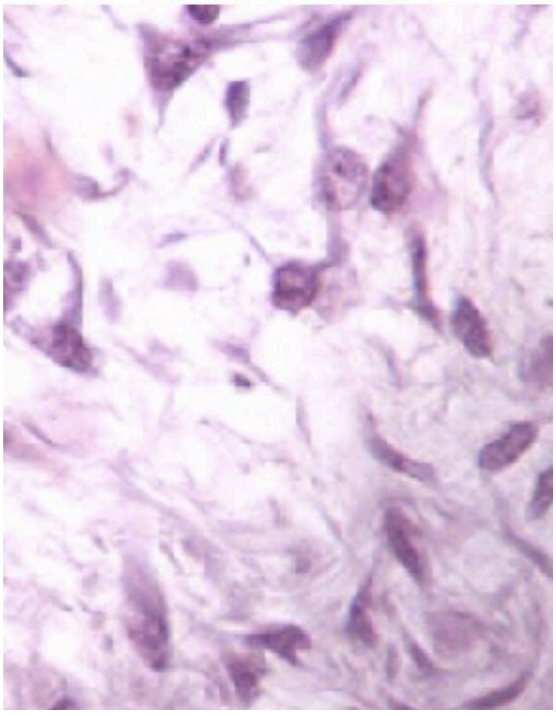

4. Name this fiber (thick, pink).

5. Name this cell.

Write each answer on its line with a dry-erase marker, then flip the card to check.

PRACTICE

Name this tissue

1. Name this tissue.

2. What does it look like?

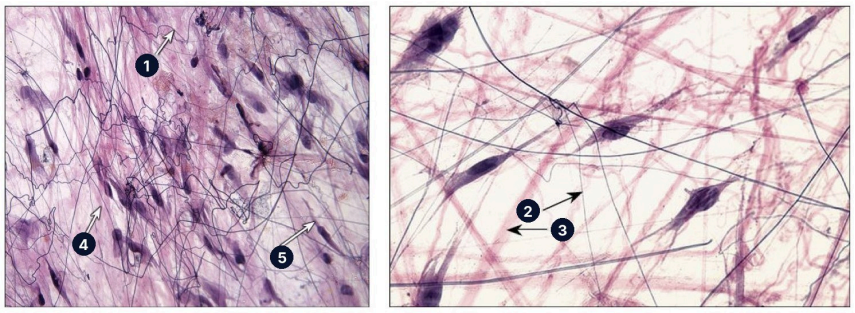

3. Where is it found?

4. What does it do?

Write each answer on its line with a dry-erase marker, then flip the card to check.

ANSWER KEY

Fibers in connective tissue

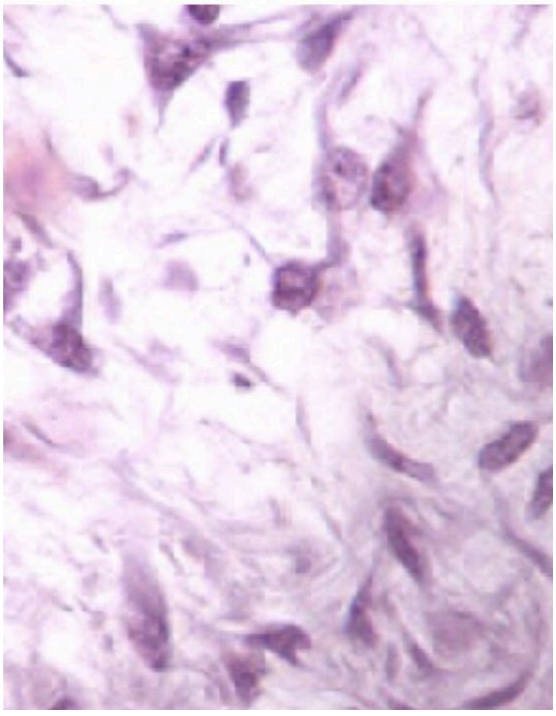

1. Name this fiber (thin, dark, branching).
   Elastic fiber
2. Name this fiber (thin, dark, branching).
   Elastic fiber
3. Name this fiber (thick, pink).
   Collagen fiber
4. Name this fiber (thick, pink).
   Collagen fiber
5. Name this cell.
   Fibroblast

Check your answers, then wipe the front clean for the next round.

ANSWER KEY

Name this tissue

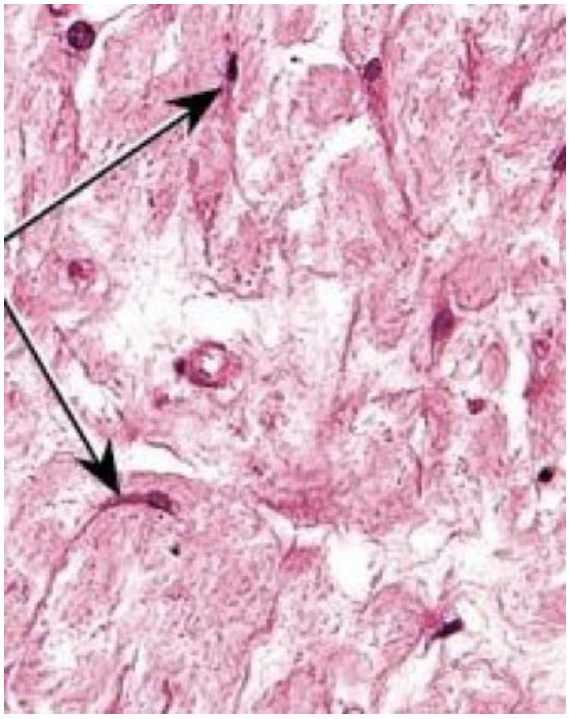

1. Name this tissue.
   Mesenchyme
2. What does it look like?
   Star-shaped mesenchymal cells in a gel-like ground substance
3. Where is it found?
   The embryo
4. What does it do?
   Gives rise to all other connective tissues

Check your answers, then wipe the front clean for the next round.

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 15 · CONNECTIVE TISSUE

PRACTICE

Name this tissue

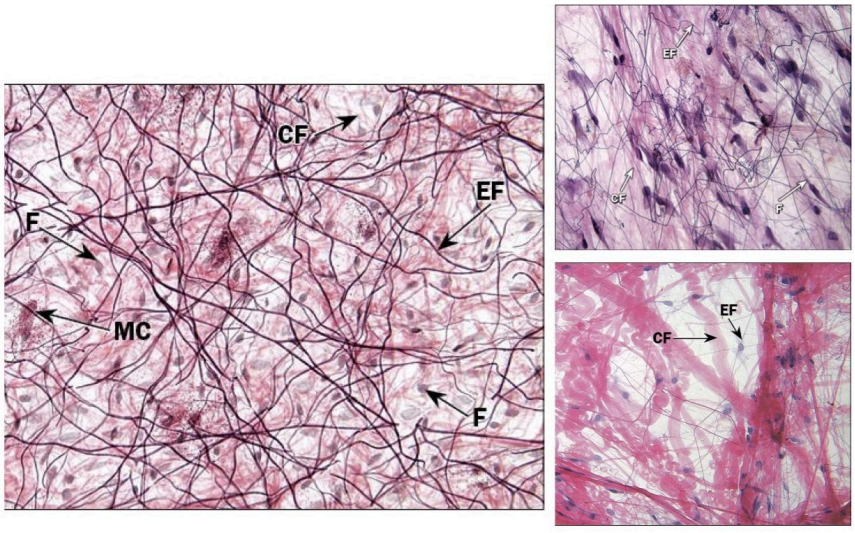

1. Name this tissue.
2. What does it look like?
3. Where is it found?
4. What does it do?

Write each answer on its line with a dry-erase marker, then flip the card to check.

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 16 · CONNECTIVE TISSUE

PRACTICE

Name this tissue

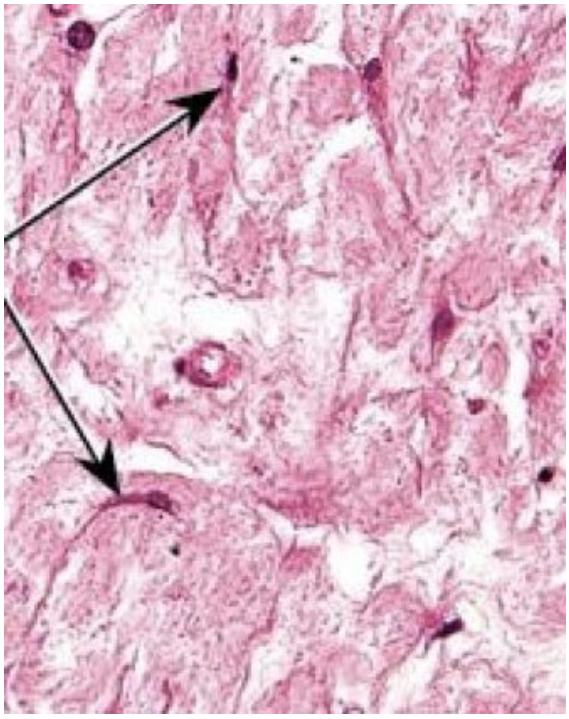

1. Name this tissue.
2. What does it look like?
3. Where is it found?
4. What does it do?

Write each answer on its line with a dry-erase marker, then flip the card to check.

ANSWER KEY

Name this tissue

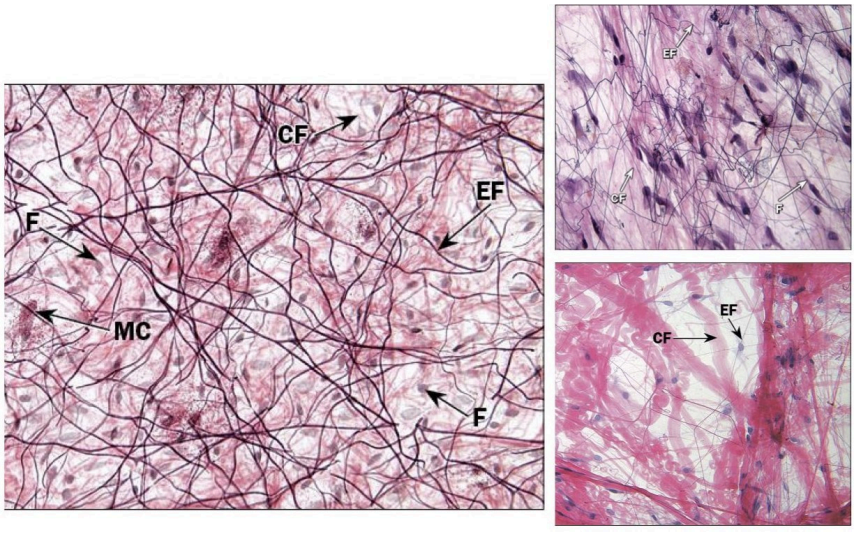

1. Name this tissue.
   Mucous connective tissue
2. What does it look like?
   Like mesenchyme but more jelly-like (Wharton's jelly)
3. Where is it found?
   Umbilical cord
4. What does it do?
   Supports the umbilical cord

Check your answers, then wipe the front clean for the next round.

ANSWER KEY

Name this tissue

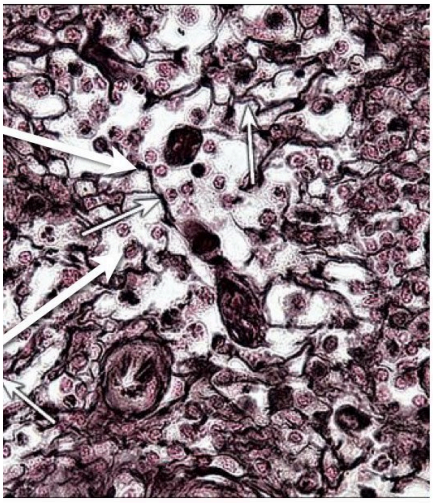

1. Name this tissue.
   Areolar connective tissue
2. What does it look like?
   Loose web of collagen and elastic fibers with fibroblasts, macrophages and mast cells
3. Where is it found?
   Under epithelia; lamina propria of mucous membranes; around organs and capillaries
4. What does it do?
   Wraps and cushions organs; holds tissue fluid; fights infection

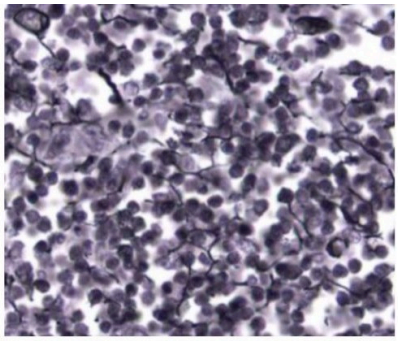

Check your answers, then wipe the front clean for the next round.

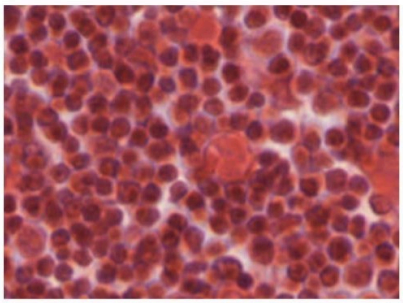

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 17 · CONNECTIVE TISSUE

PRACTICE

Name this tissue

1. Name this tissue.

2. What does it look like?

3. Where is it found?

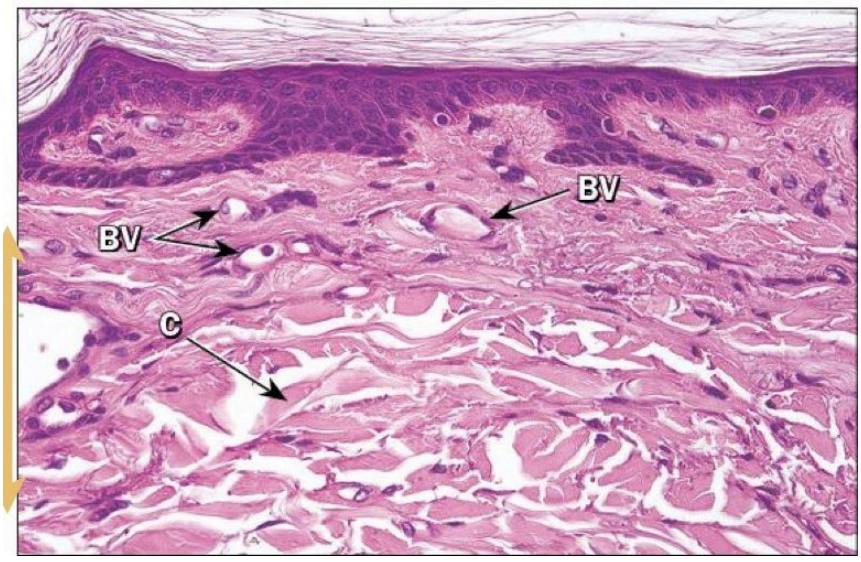

4. What does it do?

Write each answer on its line with a dry-erase marker, then flip the card to check.

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 18 · CONNECTIVE TISSUE

PRACTICE

Name this tissue

1. Name this tissue.

2. What does it look like?

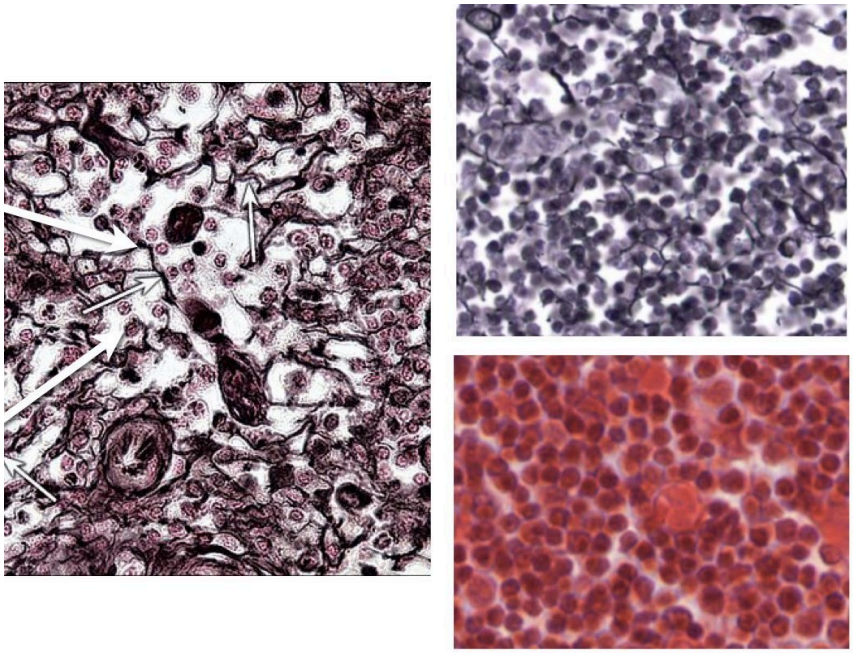

3. Where is it found?

4. What does it do?

Write each answer on its line with a dry-erase marker, then flip the card to check.

ANSWER KEY

Name this tissue

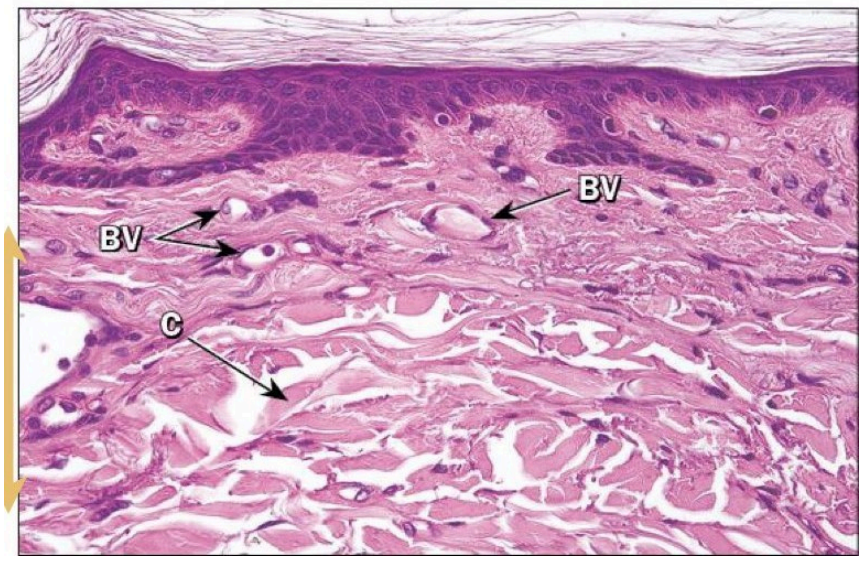

1. Name this tissue.
   Reticular connective tissue
2. What does it look like?
   Network of thin reticular fibers with reticular cells
3. Where is it found?
   Lymph nodes, spleen, bone marrow
4. What does it do?
   Forms a soft internal framework (stroma) that holds blood cells

Check your answers, then wipe the front clean for the next round.

ANSWER KEY

Name this tissue

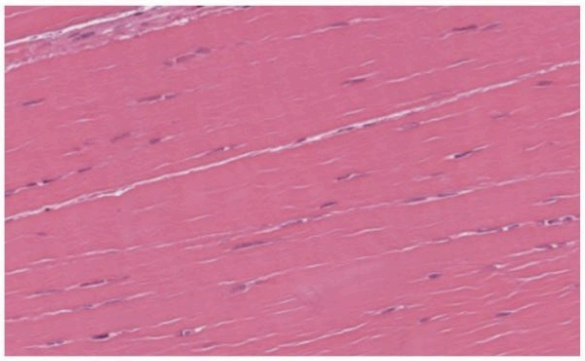

1. Name this tissue.
   Dense irregular connective tissue
2. What does it look like?
   Collagen fibers running in many directions; fibroblasts
3. Where is it found?
   Dermis of the skin, submucosa of the digestive tract, capsules of organs and joints
4. What does it do?
   Resists tension from many directions

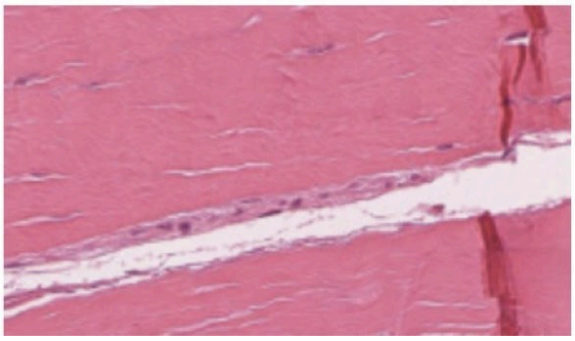

Check your answers, then wipe the front clean for the next round.

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 19 · CONNECTIVE TISSUE

PRACTICE

Name this tissue

1. Name this tissue.

2. What does it look like?

3. Where is it found?

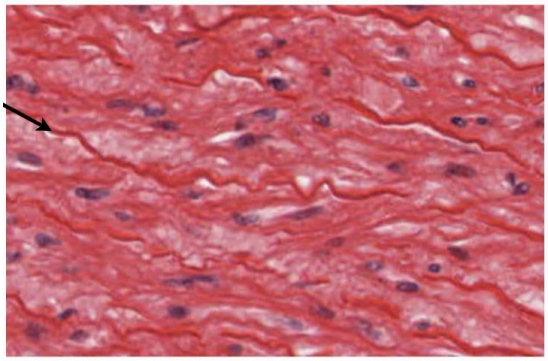

4. What does it do?

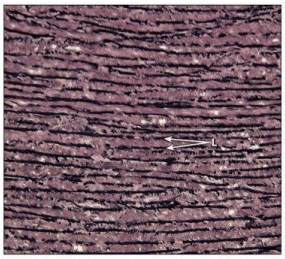

Write each answer on its line with a dry-erase marker, then flip the card to check.

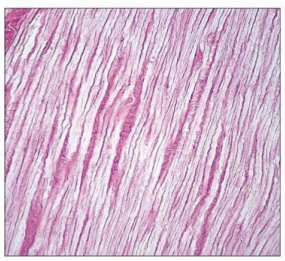

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 20 · CONNECTIVE TISSUE

PRACTICE

Name this tissue

1. Name this tissue.

2. What does it look like?

3. Where is it found?

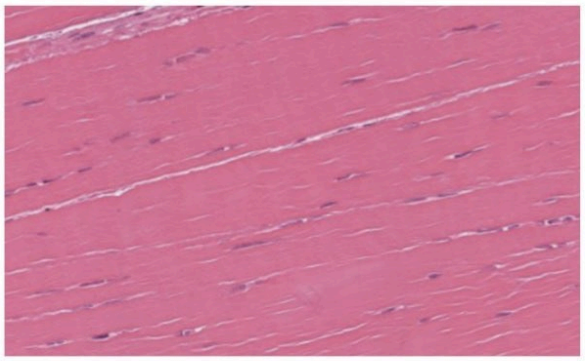

4. What does it do?

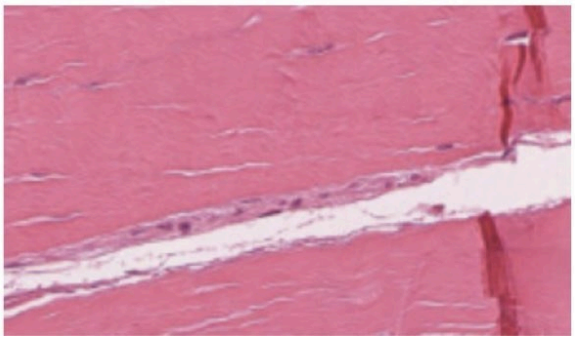

Write each answer on its line with a dry-erase marker, then flip the card to check.

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 19 · CONNECTIVE TISSUE

ANSWER KEY

Name this tissue

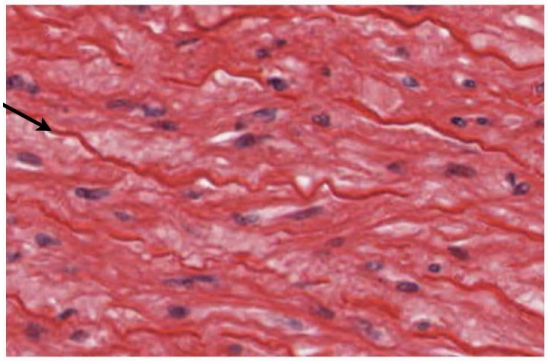

1. Name this tissue.
   Dense regular connective tissue
2. What does it look like?
   Parallel bundles of collagen fibers with rows of fibroblasts
3. Where is it found?
   Tendons, most ligaments, aponeuroses
4. What does it do?
   Resists strong pull in one direction; attaches muscle to bone and bone to bone

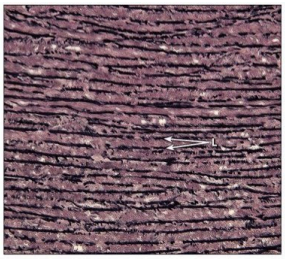

Check your answers, then wipe the front clean for the next round.

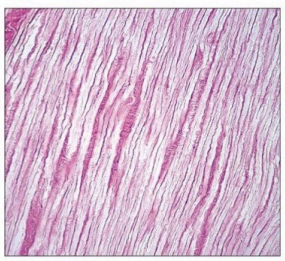

BIO 004 ANATOMY ATLAS · EPITHELIAL AND CONNECTIVE TISSUES · CARD 20 · CONNECTIVE TISSUE

ANSWER KEY

Name this tissue

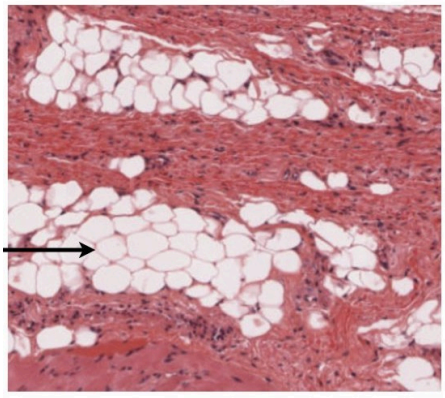

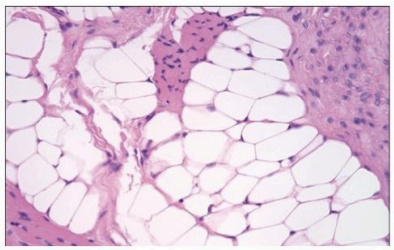

1. Name this tissue.
   Elastic connective tissue
2. What does it look like?
   Dense tissue with many elastic fibers
3. Where is it found?
   Walls of large arteries, some vertebral ligaments, bronchial tubes
4. What does it do?
   Lets tissue recoil after stretching

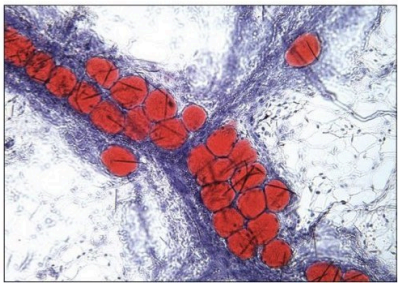

Check your answers, then wipe the front clean for the next round.

PRACTICE

Name this tissue

1. Name this tissue.

2. What does it look like?

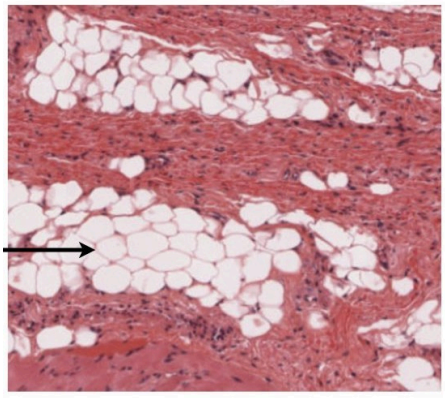

3. Where is it found?

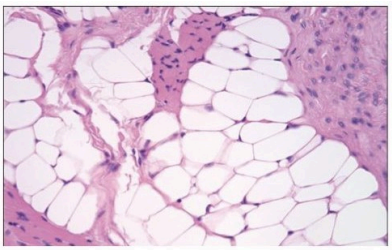

4. What does it do?

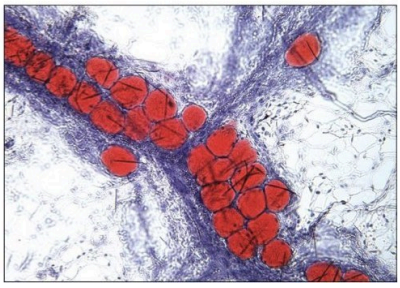

Write each answer on its line with a dry-erase marker, then flip the card to check.

ANSWER KEY

Name this tissue

1. Name this tissue.
   Adipose tissue
2. What does it look like?
   Large, empty-looking fat cells (adipocytes) with nuclei pushed to the edge
3. Where is it found?
   Under the skin, around the kidneys and eyeballs, in the abdomen and breasts
4. What does it do?
   Stores energy, insulates, cushions and protects organs

Check your answers, then wipe the front clean for the next round.
